

Implementation Manual

The Main class is Main.java file. The Main scene contains buttons that can open the Convert Time or the Convert Current Time screens. Additionally, the Main scene stores the values put in the text boxes for adding hours, minutes, and seconds to the time, which are then called from the Convert Time button.

Both clock displays are generated from the ClockPane.java file, which stores the circle, numbers, and hands, which are used to construct the clocks.
