

User Manual

To use the Time Converter, first run the Main.java file. If you want to convert the system's current time, press the button labeled "Convert Current Time." If you want to convert a specified time, enter the hour, minute, and second values in the respective boxes. A numerical input must be added to all three of these boxes, so if input is not desired, simply enter 0. Both 12- and 24-hour values are accepted. To close, simply press the X at the top right of the window.
